OSI (Open Systems Interconnection)

Layer			Protocol data unit (PDU)	Function[27]
Host layers	7	Application	Data	High-level protocols such as for resource sharing or remote file access, e.g. HTTP.
	6	Presentation		Translation of data between a networking service and an application; including character encoding, data compression and encryption/decryption
	5	Session		Managing communication sessions, i.e., continuous exchange of information in the form of multiple back-and-forth transmissions between two nodes
	4	Transport	Segment	Reliable transmission of data segments between points on a network, including segmentation, acknowledgement and multiplexing
Media layers	3	Network	Packet, Datagram[28]	Structuring and managing a multi-node network, including addressing, routing and traffic control
	2	Data link	Frame	Transmission of data frames between two nodes connected by a physical layer
	1	Physical	Bit, Symbol	Transmission and reception of raw bit streams over a physical medium

CIDR (Classless Inter-Domain Routing)

IP helbideak esleitu eta bideratzea sareetan

Adibidea: 192.168.1.0/24

sarea: 192.168.1.0 - 192.168.1.255 / host edo azpisarea 192.168.1.1 - 192.168.1.254

Sare-maskara (router-ak sare batetik bestera): 255.255.255.0

Sare trafikoa lortzea

Wireshark laborategia

Sarearen segmentazioa

Segmentazio fisikoa

Segmentazio logikoa VLAN bidez (OSI 2. geruza): gailuak funtzionalitatearen arabera taldekatu

Segmentazio logikoa azpisareen bidez (OSI 3. geruza): sarea azpisare txikiagoetan banatzea (IP helbideen barrutia)

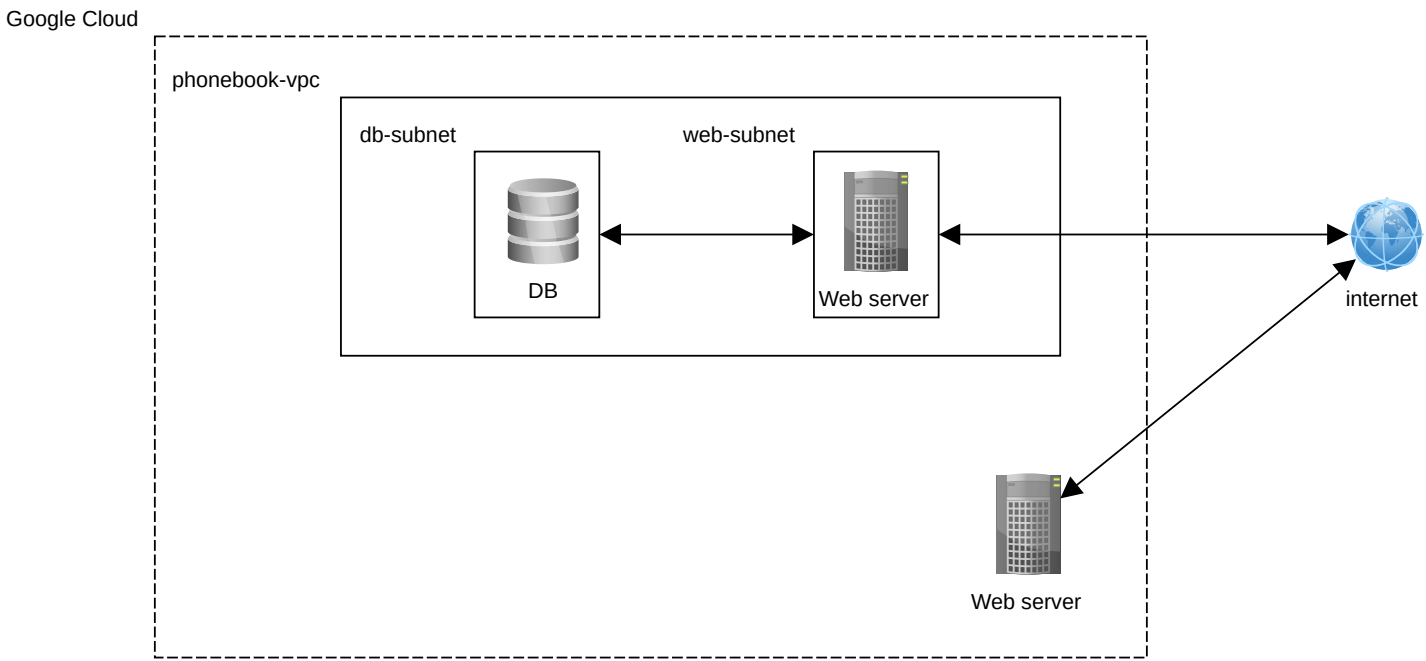

VPC (Virtual Private Cloud)

- Isolamendua: sarea logikoki beste bezero edo erabiltzaile batzuetatik bereizita dago
- IP kontrola: IP helbide-barrutiak, azpisareak eta bide-taulak hautatzea
- Gateways: Interneteko gateway-ak eta NAT-ek sarrerako eta irteerako trafikoa kontrolatzen dute

VPC Google Cloud

Firewall arauen helburuak tag-en bidez definitzen dira (adib. http-server, https-server) CIDR blokeen ordez
